

CD2 transforms the way you deliver one of the most strategic drivers of business value: content. Different by design, CD2 Learning offers the only complete, cloud-based offering in the market flexible enough to offer a CMS, LMS, and a social collaboration platform with built-in content authoring tools. We allow you to quickly and easily create, deliver, and track customized content across a spectrum of applications. Finally, a new way to meet the evolving learning needs of your employees and customers.

One Solution Built By One Team

Content Management

Easily find, repurpose, and deliver content quickly in a system tailored to meet your needs. Save resources by eliminating the need for multiple applications and completely transform the way your customers and employees experience your content.

Learning Management

Quickly and easily create and track online, blended, and live training opportunities. Transform the learning experience by reaching people where they are and include social media and gamification with a solution that delivers anywhere or anytime.

Content Authoring

Use our award-winning tools to construct interactive, real-world simulations, games, assessments, and other activities while gathering analytics on every click. Create a new level of engagement that meets the ever-changing needs your users.

Social Collaboration

Solve problems, innovate faster and harness the expertise and viewpoints of others in a collaborative solution. Streamline your processes and see them work for you step-by-step in a single, cloud-based system.

CONTENT DRIVEN DELIVERY (CD2)

- 2015 Top winner in the People's Choice Stevie® Awards
- 2014 Top winner in the People's Choice Stevie® Awards

CD2 Innovative Features

Moment-in-Time - Create Content Anywhere, Anytime

In today's continuously connected world, information and training can rapidly become obsolete. Take advantage of the audio/video capabilities of devices to ensure a true real-time experience.

Innovator - Content Authoring with Revolutionary Tracking

Add a new level of engagement for users. Innovator is a fully embedded and internally developed tool designed with a drag-and-drop interface to visually construct interactions - no code to write! For in-depth data collection, use audit paths and checkpoint to track every click/touch.

Gamification

Add an element of fun to your learning system by engaging users through gamification. Create a custom learning process map where points are accrued and badges are automatically rewarded as users complete tasks. Use multiple data elements to customize your requirements for each badge.

Personalized Learning - Educate Using Outcomes

Customized lessons created through "The Personal Learning Path" links learning outcomes with lesson content. The robust analytics platform generates new lessons based upon assessment performance. (Non-linear delivery for today's user.)

Collaboration - Online Discussions Using Your Content

Keep your organization up to date and share ideas using social collaboration. Start new threads and make use of integrated social media tools. Rate comments to collectively identify the best ideas/discussions and keep the most valuable conversations at the forefront.

Collaborative Workflows - Track Processes In One Place

Select a single point for tracking linear or dynamic processes. The CD2 Collaborative Process Map provides an intuitive interface where users interact by viewing steps and completing the associated activities. (Documentation and reporting keep the process on track.)

Extended Enterprise Training - Offer Your Courses Externally

Sell your content and create a new source of revenue by leveraging an integrated eCommerce store. Each course can be sold individually or as part of a package. Upon purchase, users have instant access to the training.
