

Work Collaboratively on Any Workflow

Globally dispersed workforces require an efficient and practical way to communicate and to manage people, tasks, and resources. CD2's answer is the Collaborative Process Map (CPM) - an effective means of creating and managing a "map" to guide users through a series of tasks. Managers and users can work collaboratively as tasks progress. Using the CD2 CPM component, any defined process or workflow - linear or dynamic - can be created and monitored.

Improve effectiveness on joint tasks by:

- Removing the communication barriers between team members
- Minimizing organizational boundaries and information silos
- Allowing social interaction to be goal oriented, structured, and measured

Intuitive Interface

The CD2 CPM component provides an intuitive interface allowing users (with specific permission) to create a workflow and associated activities. (View content, use tools, participate in collaborations, and more.) Once configured, the process map is shared with a group of users. They interact with the process map by selecting a step to view and complete the associated activities. A process map is an effective solution for onboarding new employees and clients. Using a drag-and-drop interface, those involved in the process can upload and share documents associated to each step.

Awards & Recognition:

- 2016 ABA Stevie Award (1 Gold & 2 Bronze)
- (9) 2015 ABA Stevie Awards (2 People's Choice)
- 2016 Top 50 LMS - Craig Weiss Report
- 2015 Top 10 List - World's Best Talent LMS

Manage Complex Sets of Tasks

The CD2 Collaborative Process Map is a versatile tool for organizations looking to boost collaboration and develop an online record of processes. The CPM is part of an organically grown system, ensuring complete integration with all components within the CD2 platform. Combined with the content management library, social collaboration, and other system capabilities, the CPM provides a complete solution for managing any complex set of tasks.

Capabilities of CPM include:

- Store and manage content elements using the power of the CD2 content management system
- Use tools to set/align goals and to achieve outcomes
- Work collaboratively with team members to complete shared and individual tasks
- Reuse maps or add additional tasks
- View up-to-the-minute status on tasks, give feedback, and view reports
- Encourage engagement with gamification
